Summary

Backend engineer focused on distributed systems and data pipelines, with production experience building Python services, event-driven architectures and observability tooling across two regulated industries.

Technical Skills

Languages: Python, Go, SQL, TypeScript
Backend: Django, FastAPI, Celery, gRPC, REST APIs
Data: PostgreSQL, Redis, Kafka, dbt, Query Optimisation
Cloud & Tooling: AWS, Docker, Kubernetes, Terraform, GitHub Actions, Load Testing

Experience

Senior Backend Engineer — Mar 2022 - Present
Northwind Logistics — Bristol, United Kingdom

- Rebuilt the shipment tracking service in Python and FastAPI, cutting p99 latency by 63% across 4M daily events.
- Introduced Kafka-based event streaming, replacing a nightly batch job and reducing data staleness from 18 hours to under 2 minutes.
- Mentored 4 engineers through design review and on-call onboarding.

Backend Engineer — Jul 2019 - Feb 2022
Cavendish Health — Reading, United Kingdom

- Built HL7 and FHIR ingestion pipelines processing 250k patient records daily, replacing a manual nightly import.
- Reduced infrastructure spend by 31% by right-sizing ECS services.

Projects

Ledger Reconciliation Engine | Python, PostgreSQL, Celery GitHub | Demo

- Reconciles 1.2M daily transactions against three upstream ledgers with idempotent replay and a full audit trail.
- Exposes a REST API and a Prometheus metrics endpoint.

Observability Starter Kit | Terraform, Grafana, Prometheus GitHub

- Opinionated Terraform module deploying a metrics and tracing stack.

Certifications

AWS Certified Solutions Architect | Amazon Web Services | 2023
Certified Kubernetes Administrator | CNCF | 2022

Achievements

- Speaker at PyCon UK 2023 on event-driven Python.

Education

BSc, Computer Science | First Class Honours — 2015 - 2018
University of Bristol, Bristol
